

Protect the health and welfare of family, friends, guests and pets in your home. Ask for a UV-C Germicidal System from American Ultraviolet, and wash unwelcome airborne bacteria away from the inside of your home.

In addition to providing reliable ultraviolet sterilization products for homes like yours, since 1960 American Ultraviolet has placed systems in hospitals, laboratories, clean rooms, doctors' offices, commercial buildings, government buildings and food processing plants—any place a concern for clean air exists. American Ultraviolet is the clear leader in UV technology, and remains committed to providing the highest quality equipment at a fair price.

Prolonged, direct exposure to UV-C light can cause temporary skin redness and eye irritation, but does not cause skin cancer or cataracts. American Ultraviolet Company systems are designed with safety in mind and, when properly installed by a professional contractor, do not allow exposure to UV irradiation and allow for safe operation and maintenance.

Residential UV-C germicidal systems from

American Ultraviolet®

Protect the health and welfare of family, friends, guests and pets in your home.

American Ultraviolet®

Since 1960. It's all we do.

Residential UV-C germicidal solutions from American Ultraviolet are safe, efficient, economical, and easy to install. By treating air that passes through your HVAC unit with ultraviolet light, you will reduce, or even eliminate, DNA-based airborne contaminants (bacteria, viruses, mold spores, yeast, protozoa), and have much healthier air to breathe.

You'll also help prevent the spread of the common cold and other airborne infections. Tens of thousands of systems have been installed in residences nationwide, and, because they're so effective at purifying indoor air, it is predicted that almost every residence will eventually have one.

UV protection since 1960

Prevent cold, flu, asthma, allergies and more

Ultraviolet light has been safely used to sanitize air in hospitals, clinics, medical and dental offices, commercial buildings, government buildings and food plants for more than 60 years. Take advantage of this safe technology to protect everyone in your home.

The Environmental Protection Agency states:

- 90% of colds are caught indoors
- Air inside your home can be 70 times more polluted than outdoor air

No wonder people suffer from persistent colds, asthma, allergies and more, despite desperate attempts to dust more often, keep windows closed, and clean bedding, clothing, carpeting and furniture more frequently.

Ductwork is simply full of airborne germs that cause many of these conditions, so you need a system that kills the germs before they're blown past the furnace or air conditioning filter and circulate throughout your home. You need the Eliminator RPT™ or Sapphire™ from American Ultraviolet. Wherever people congregate, American Ultraviolet UV-C germicidal systems play an important part of preventing the spread of airborne infections. Our systems:

- Do not produce ozone, fumes or other secondary contaminants
- Operate continuously at maximum efficiency, without need for constant adjustment
- Withstand hazardous HVAC conditions while providing higher kill ratios over a broader range of microbes
- Prolong the life of HVAC systems and help maintain system efficiency
- Are manufactured in the USA and come factory assembled and tested

To reduce, and even eliminate, unwelcome airborne bacteria in your home, American Ultraviolet offers a complete family of residential UV-C germicidal systems, including:

The Eliminator™ RPT

- Plug-in transformer with "On" LED indicator, open circuit protection and thermal protection
- High-output UVC lamp options fit variety of air handling set-ups (14, 16, 20 and 24" lengths)

The Sapphire™

- Stainless steel housing
- High-output lamps
- Easy-to-install; easy-to-replace lamps

The Blade

- Handheld/Portable
- Destroy bacteria in hard-to-reach places
- Effective for mold remediation

The Genie

- Clean 320 sq. ft. room in only 14 minutes
- 750 sq. ft. coverage
- Digital touch screen display and remote control

The AQ Series

- Safely, effectively destroy viruses and bacteria that may be resistant to chemical treatment
- Individual and whole-house installations
- Will not change color, odor or taste of water
